Power Panels

Power Panels are a packaged power system. They are less expensive than an on-site component installation and meet many power application needs. To install Power Panels, simply connect them to the battery, PV and or AC loads. Power Panels include inverters and are assembled with components specified by the customer.

Features include:

- One or two SW or DR inverters
- Powder coated steel back-plate pre-wired with all NEC/UL requirements, AC & DC over current protection and disconnects: only for indoor installation
- Negative/ground bonding block
- Single or dual C40 charge controllers for use DC charging sources
- Optional nonmetallic battery enclosure which doubles as a shipping enclosure
- Flexible conduit for connection of the system to the battery enclosure
- 60 amp AC system bypass that allows inverter servicing while keeping AC loads connected to the grid or generator
